SUMMARY

DevOps Engineer with hands-on internship experience at KUBICL, working with Amazon Web Services (AWS) cloud infrastructure, Docker, and Kubernetes for deploying and managing applications. Used Terraform for Infrastructure as Code (IaC) to set up infrastructure, and GitHub Actions with ArgoCD to automate deployments. Comfortable with Linux systems, with working knowledge of Prometheus and Grafana for monitoring. Focused on automating deployments and building reliable, scalable systems.

SKILLS

Cloud Platforms: Amazon Web Services (AWS) — EC2, S3, IAM, VPC
Containers & Orchestration: Docker, Kubernetes
Infrastructure as Code (IaC): Terraform
CI/CD & GitOps: GitHub, GitHub Actions, ArgoCD
Monitoring & Observability: Prometheus, Grafana
Operating Systems: Linux

EXPERIENCE

KUBICL

DevOps Engineer Intern *02/2025 – 05/2025*

- Set up AWS infrastructure (EC2, VPC, IAM, S3) using Terraform for Infrastructure as Code (IaC), so environments could be created quickly and consistently instead of manually.
- Deployed applications using Docker and managed them with Kubernetes on Linux servers.
- Built Continuous Integration/Continuous Deployment (CI/CD) pipelines using GitHub Actions to automatically build and deploy code changes.
- Used ArgoCD so that changes pushed to GitHub were automatically deployed to Kubernetes.
- Set up Prometheus and Grafana to monitor application performance and system health.

PROJECTS

Cloud-Native Microservices Deployment using AWS, Docker, Kubernetes & Terraform

- Packaged 5 small services into Docker containers and stored them in a container registry.
- Used Terraform to set up AWS infrastructure and deployed the services on Kubernetes, cutting environment setup time from hours to minutes.
- Automated building and testing of Docker images with GitHub Actions on every code change.
- Used ArgoCD so deployments updated automatically whenever code changed, cutting manual deployment work by around 70%.

End-to-End CI/CD Pipeline using GitHub Actions, Docker & Terraform

- Packaged the application with Docker and used GitHub Actions to build it automatically on every code commit.
- Added automated tests and basic checks to catch issues before deployment.
- Used Terraform to create 3 separate environments (dev, staging, production), cutting manual setup work by around 65%.

Monitoring & Alerting Stack using Prometheus and Grafana

- Set up Prometheus and Grafana to collect and display system and application performance data.
- Set up alerts for high CPU usage, high memory usage, and unhealthy pods.
- Built Grafana dashboards to track key metrics like response time, resource usage, uptime, and traffic.

EDUCATION

Lakshmi Narain College of Technology University, Bhopal *2026 – Present*
Master of Technology (MTech) in Computer Science and Engineering

Sagar Institute of Research and Technology – Excellence, Bhopal *2021 – 2025*
Bachelor of Technology (BTech) in Computer Science and Engineering | CGPA: 7.49 / 10

Little Angels H.S. School, Bhopal *2019 – 2020*
Higher Secondary Education

KEY ACHIEVEMENTS

State-Level Cricket Player

Selected to represent at the state level in cricket, demonstrating strong teamwork, leadership, and composure under competitive pressure.
